

South East London Integrated Medicines Optimisation Committee (SEL IMOC)

Direct Oral Anticoagulant (DOAC) Initiation and Monitoring Guidance for Non- Valvular Atrial Fibrillation (AF)

Please note that the initiation and monitoring recommendations in this document apply to patients with the atrial fibrillation (AF) indication and NOT for patients with deep vein thrombosis (DVT) or pulmonary embolism (PE) or other venous thromboembolism (VTE). The dosing recommendations and DOAC choice are different for VTE patients and this guidance should not be referred to for these patients.

Approval date: February 2024 Review date: February 2026 (or sooner if evidence or practice changes)

Not to be used for commercial or marketing purposes. Strictly for use within the NHS

South East London Integrated Medicines Optimisation Committee (SEL IMOC). A partnership between NHS organisations in South East London Integrated Care System: NHS South East London (covering the boroughs of Bexley/Bromley/Greenwich/ Lambeth/Lewisham and Southwark) and GSTFT/KCH /SLaM/ Oxleas NHS Foundation Trusts and Lewisham & Greenwich NHS Trust

1

Direct Oral Anticoagulant (DOAC) Initiation and Monitoring Guidance for Non- Valvular Atrial Fibrillation (AF)

Which Patients? Assess need and offer/refer for anticoagulation (using local referral form on DXS):

- Non-Valvular AF/Atrial Flutter
- <u>CHA2DS2-VASc</u> \geq 2 (consider \geq 1 for men)
- A cardioversion/ablation procedure when advised by a cardiology specialist (*started regardless of CHA2DS2-VASc score. If the score is 0, then patients do not require long term anticoagulation following the procedure*)

² Does the patient have a contraindication to DOAC? If YES to any of the below – refer to anticoagulation specialist Known intolerance to anticoagulation/previous serious bleed (consider a lesion or condition that is a significant risk for major bleeding e.g. current or recent gastrointestinal ulceration, known or suspected oesophageal varices)

- Hepatic disease associated with coagulopathy
- Mechanical heart valve
- Transcatheter aortic valve implantation within last 3/12
- Mitral valve replacement or repair within last 3/12
- Known moderate to severe mitral stenosis (valvular AF)
- Active or underlying cancer
- Pregnant/breastfeeding or planning a pregnancy
- Triple positive antiphospholipid syndrome (APLS)

3 Assess for initiation of DOAC

Parameter	Action	When to refer
Actual weight	- Measured within the last year	- < 50kg or >150kg
Creatinine clearance (CrCL)	 Refer to <u>calculating renal function guidance</u> (do NOT use eGFR or ideal body weight for CrCL) Review nephrotoxic medication if CrCL is reduced. Please see <u>Guidelines for Medicines</u> <u>Optimisation in patients with Acute kidney</u> <u>Injury</u> 	 CrCL < 30ml/min (if CrCL < 15ml/min, DOAC is contra- indicated- requires a warfarin referral/consideration) Dialysis patients CrCL > 95ml/min (The use of edoxaban is cautioned – use alternative DOAC)
Blood results (within the last month)	 U&Es - serum creatinine (Cr) FBC – Haemoglobin (Hb), platelets (Plts) LFTs – AST/ALT, bilirubin and baseline clotting screen 	 Hb low (<100g/l) with no identifiable cause, plts <100 units. LFTs - >2 X ULN, bilirubin > 1.5 x ULN, abnormal clotting screen.
Bleeding risk HASBLED or ORBIT score	 Modify risk factors to reduce bleeding e.g., BP control, use of NSAIDs, alcohol, obesity <u>HASBLED</u> <u>ORBIT</u> 	 Gastrointestinal/genitourinary bleed within 3/12 intracranial haemorrhage within 6/12 severe menorrhagia known bleeding disorders known cirrhosis
Alcohol	- Aim < 8 units per week	- Known liver cirrhosis
Blood pressure (BP) mmHg	 Address uncontrolled hypertension- systolic BP > 140mmHg 	 If SBP >180mmHg same day review
Concurrent medication	 Antiplatelets- review course length and indication NSAIDs- bleeding risk Drug interactions – Refer to <u>SPC</u>, <u>BNF</u> and <u>HIV</u> <u>drug interaction</u> checker Swallowing difficulties – refer to <u>NEWT</u> 	 Dual antiplatelet therapy- cardiologist should specify time period for prescription post CVD event/intervention Antiplatelet – co-prescribing should be avoided unless advised by specialist Contraindications and interactions (ask pharmacist for advice)

South East London Integrated Medicines Optimisation Committee (SEL IMOC). A partnership between NHS organisations in South East London Integrated Care System: NHS South East London (covering the boroughs of Bexley/Bromley/Greenwich/Lambeth/Lewisham and Southwark) and GSTFT/KCH /SLaM/ Oxleas NHS Foundation Trusts and Lewisham & Greenwich NHS Trust

DOAC choice (consider patient preference and lifestyle- adapt dosing as below); see appendix 1 (counselling), appendix 2 (initiation flowchart for DOAC e.g. edoxaban in NVAF). In SEL amber 2 on <u>SEL JMF</u>

	Edoxaban	<u>Rivaroxaban</u>	<u>Apixaban</u>	Dabigatran
Standard dose	60mg OD	20mg OD (with food)	5mg BD	150mg BD
Reduced dose	30mg OD	15mg OD (with food)	2.5mg BD	110mg BD
Criteria for reduced dose in NVAF indication only	 1 or more of Weight ≤ 60kg CrCL 15-50ml/min On ciclosporin, dronedarone, erythromycin, ketoconazole 	CrCL 15-49ml/min	2 or more of : - Age ≥ 80 years - Weight ≤ 60kg - Cr ≥ 133µmol/L OR CrCl 15- 29ml/min	 Age ≥ 80 years On verapamil Consider reduced dose for reflux/gastritis, age 75-80 yrs., CrCl 30-50ml/min, "bleed risk"
Contraindicated	CrCl ≤ 15ml/min Caution in CrCl ≥ 95ml/min	CrCl < 15ml/min	CrCl <15ml/min	CrCL <30ml/min
Compliance aid	Compatible	Compatible	Compatible	Non-compatible

Monitoring: For patients who DNA for monitoring, refer to practice repeat prescribing protocol

(Ideally after 1 month of therapy)<60ml/m	quent renal, liver and haemoglobin monitoring if CrCl in, age over 75 years and/or frail- see table 6 below) – check if DOAC dosage adjustment is required <i>table 4)</i> ght - check if DOAC dosage adjustment is ired (<i>see table 4</i>)
 4) - seek advice and guidance from haematology clinic if present/a concern Check for bruising/bleeding - refer for further investigation according to local pathways as indicated FBC 	<i>table 4)</i> ght - check if DOAC dosage adjustment is
 U&Es and FBC- as specified by initiating clinic/secondary care and/or if indicated by a change to clinical state clinic Check CrCl (and review DOAC dosing- see table 4) Check medication adherence- refer to community pharmacist for NMS (New Medicines Service) and further support (refer to DOAC counselling checklist- 	 investigate any Hb drop without an identifiable e and if platelets <100 – seek advice and guidance from haematology c if Bilirubin >1.5 ULN, AST/ALT >2 x ULN s and CrCL (as per table below)- check if DOAC ge adjustment is required. racting/new medications- check if may effect C dosing and set a review/course length date x advice from pharmacist as indicated)

6

Renal function monitoring frequency: (see also guidance <u>Calculating Renal Function</u>)

Creatinine Clearance (CrCl) range (ml/min)	How often to check renal function?
<15	All DOACs contraindicated, refer to specialist (to consider warfarin)
15 to 30	3 monthly, consider referral to specialist (dabigatran contraindicated)
30 to 60 and/or aged >75 years and/or frail±	6 monthly
All patients aged > 75 years and/or frail	4 to 6 monthly ±
>60	12 monthly

±EHRA/ESC 2018: 6 monthly renal, liver function (LFT) and haemoglobin (Hb) monitoring for elderly and frail patients

South East London Integrated Medicines Optimisation Committee (SEL IMOC). A partnership between NHS organisations in South East London Integrated Care System: NHS South East London (covering the boroughs of Bexley/Bromley/Greenwich/Lambeth/Lewisham and Southwark) and GSTFT/KCH /SLaM/ Oxleas NHS Foundation Trusts and Lewisham & Greenwich NHS Trust

Avoid in breastfeeding Storage: dabigatran must be kept in original packaging – moisture sensitive. All other DOAC's suitable for medication compliance aids if required Follow-up appointments, blood tests, and repeat prescriptions: where and when Record here: Issue relevant patient information AF booklet/leaflet and anticoagulant patient alert card (<i>For AC alert card supplies</i> - http://www.nhsforms.co.uk/email: pcse.supplies-leeds@nhs.net)		
 Single/self-terminating bleeding episode – routine appointment with GP/pharmacist Prolonged/recurrent/severe bleeding/head injury – A&E Major bleeds managed/reversed by supportive measures and Prothrombin Complex Concentrate (PCC). Antidotes: <u>Idarucizumab</u> for dabigatran, <u>andexanet alfa</u> for apixaban, rivaroxaban (SEL JMF) Drug interactions and concomitant medication: avoid NSAIDs. Always check with pharmacist regarding OTC/herbal/complimentary medicines Inform all healthcare professionals of DOAC therapy: GP, nurse, dentist, pharmacist i.e. prior to surgery Pregnancy and breastfeeding: potential risk to foetus – obtain medical advice as soon as possible if pregnant/considering pregnancy. Avoid in breastfeeding Storage: dabigatran <u>must</u> be kept in original packaging – moisture sensitive. All other DOAC's suitable for medication compliance aids if required Follow-up appointments, blood tests, and repeat prescriptions: where and when Record here: Issue relevant patient information AF booklet/leaflet and anticoagulant patient alert card (<i>For AC alert card supplies</i>- <u>http://www.nhsforms.co.uk/</u>email: <u>pcse.supplies-leeds@nhs.net</u>) Give patient opportunity to ask questions and encourage follow up with community pharmacist 	Common and serious side-effects and who/when to refer: symptoms of bleeding/unexplained

Appendix 2: Initiation of Anticoagulation (AC) For Stroke Prevention In Non-Valvular Atrial Fibrillation (NVAF)

1) Patient with NVAF diagnosis: discuss risk: benefit of anticoagulant options- <u>NICE</u> recommends a DOAC first line in NVAF considering clinical features, co-morbidities, contra-indications, patient/carer preference and lifestyle (see DOAC <u>FAQs</u> for overprescribing considerations)

2) Baseline Checks before DOAC Initiation (see DOAC initiation/monitoring guidance above and <u>calculating renal function for DOACs guidance</u>)

3) Following a shared decision, prescribe a DOAC for example, edoxaban 60mg daily (see special circumstances table below, SEL <u>anticoagulation</u> <u>switch</u> guidance and <u>memo</u> concerning apixaban generic - December 2023)

Reduce dose to 30mg if: Body weight <60kg, or CrCl 15 to 49ml/min, or co-prescribed ciclosporin, dronedarone, erythromycin or ketoconazole.

4) Patient counselling (*See counselling checklist above*) give patient/carer anticoagulation alert card and product information literature. Refer to community pharmacist for New Medicines Service (NMS) to support counselling and adherence to DOAC regime

5) Schedule regular DOAC reviews including adherence checks and dosing adjustments (see <u>calculating renal</u> <u>function for DOACs guidance</u>, <u>DOAC patient pathway NVAF</u>, <u>FAQs for DOACs</u>, <u>anticoagulation switch</u> guidance)
